

Arch Profiles 2026

Introduction To Arch Profiles

Arch Profile Sheets

This page explains how to read the arch profile drawings, while the following pages show the cross-section details for each design. Together, they help you choose the right arch profile and understand how it will appear on your finished door.

Understanding The Drawings

All drawings shown represent only the top portion of the door.

Arch Profile Options

Profile 100 is the standard arch profile. To apply an arch profile to both the top and bottom rails, add a 5 to the end of the profile code (for example, 200 becomes 205).

Arch Dimensions

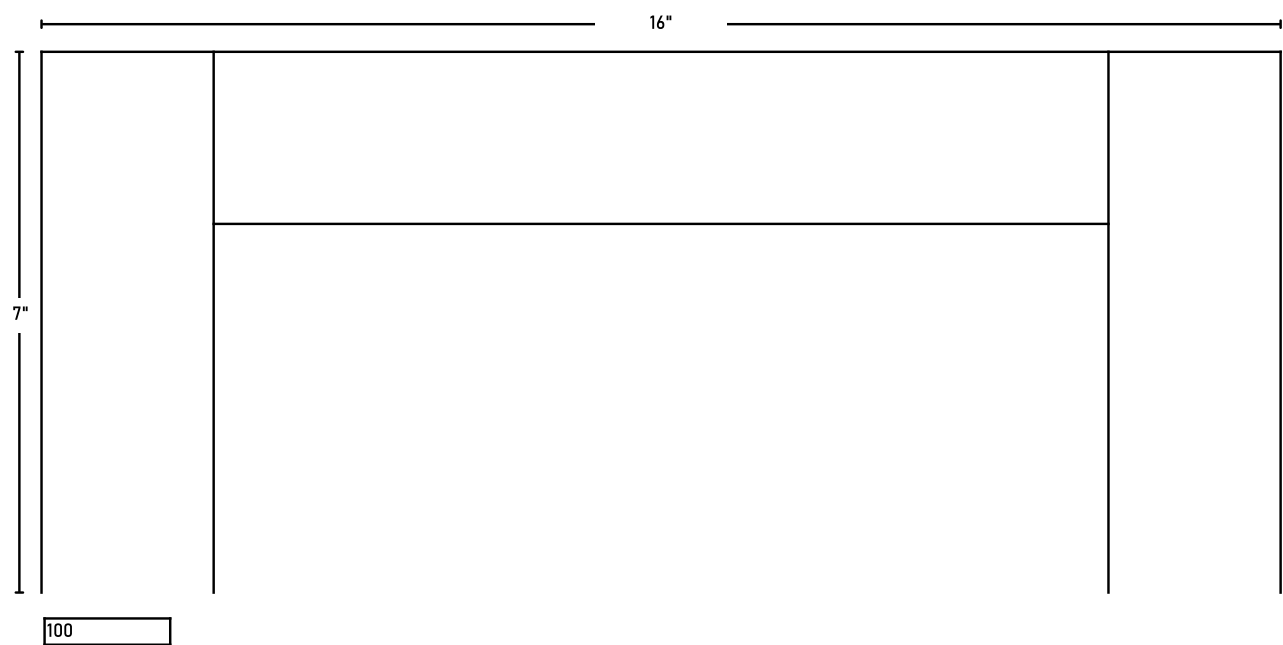

The arch rise remains fixed for each profile. As the door width changes, the shoulder widths and radii adjust proportionally to maintain the profile's appearance.

Slight Profile Variations

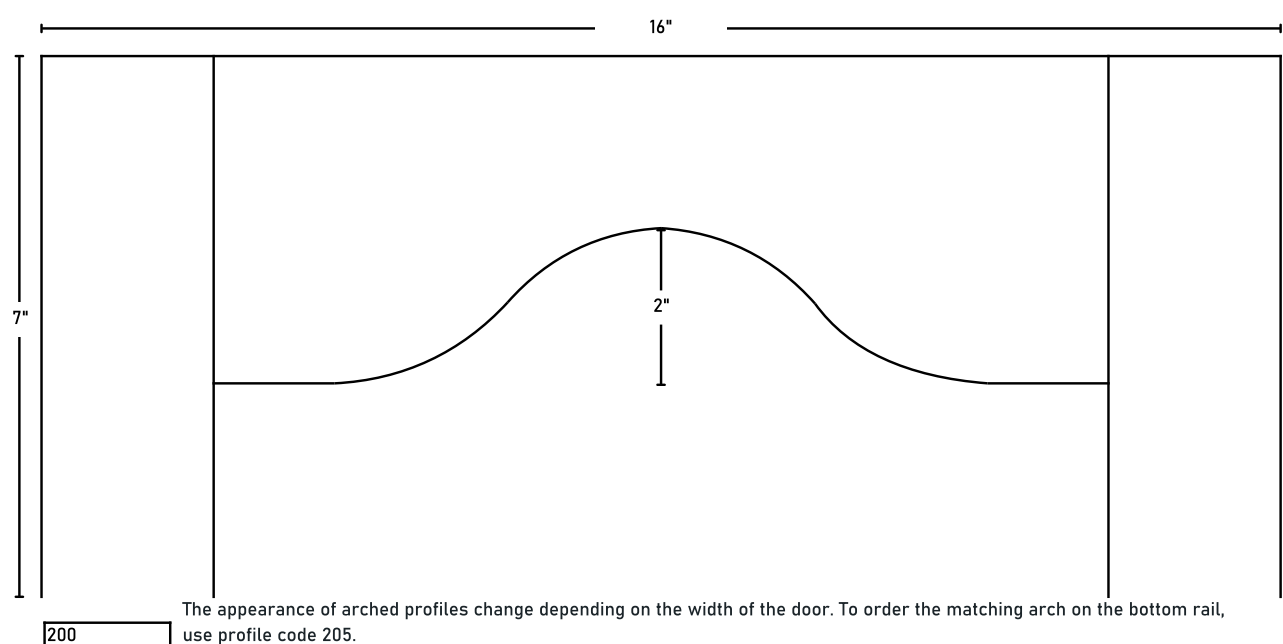

The final profile dimensions may vary slightly from the measurements shown. Each arch is machined and hand-sanded, and tooling can vary slightly over time. These minor variations are normal and will not affect the overall look or performance of your door.

Arch Profiles

Arch Profile: 100

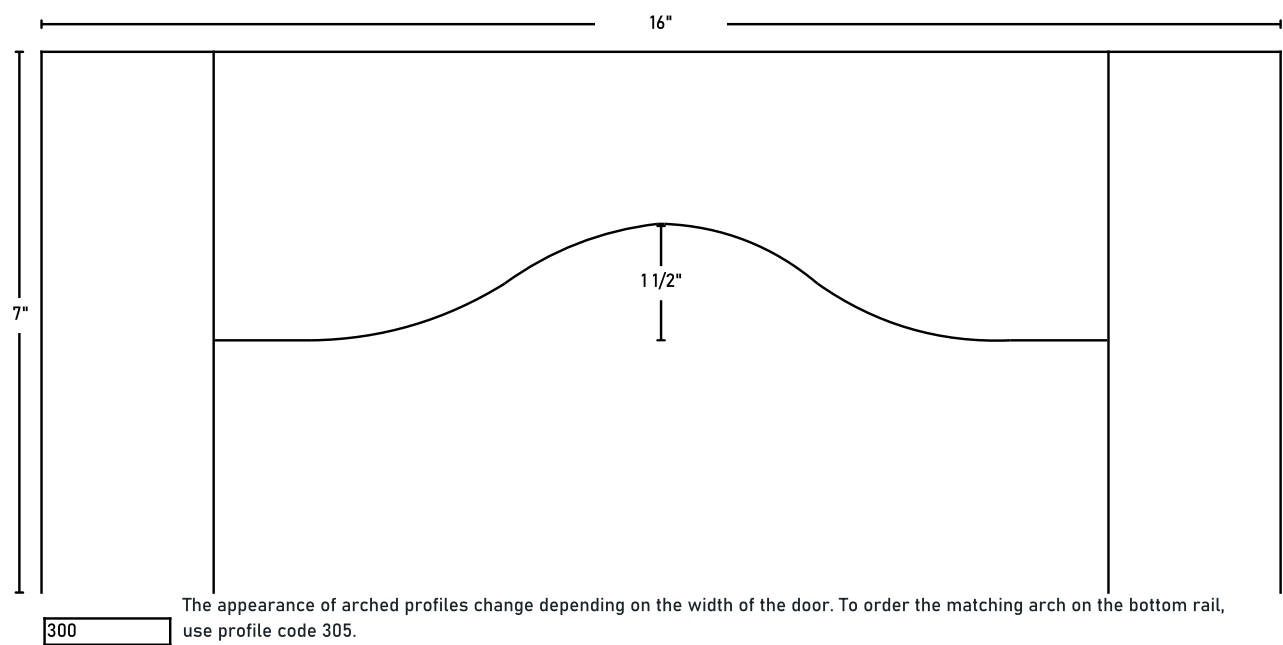

Arch Profile: 200

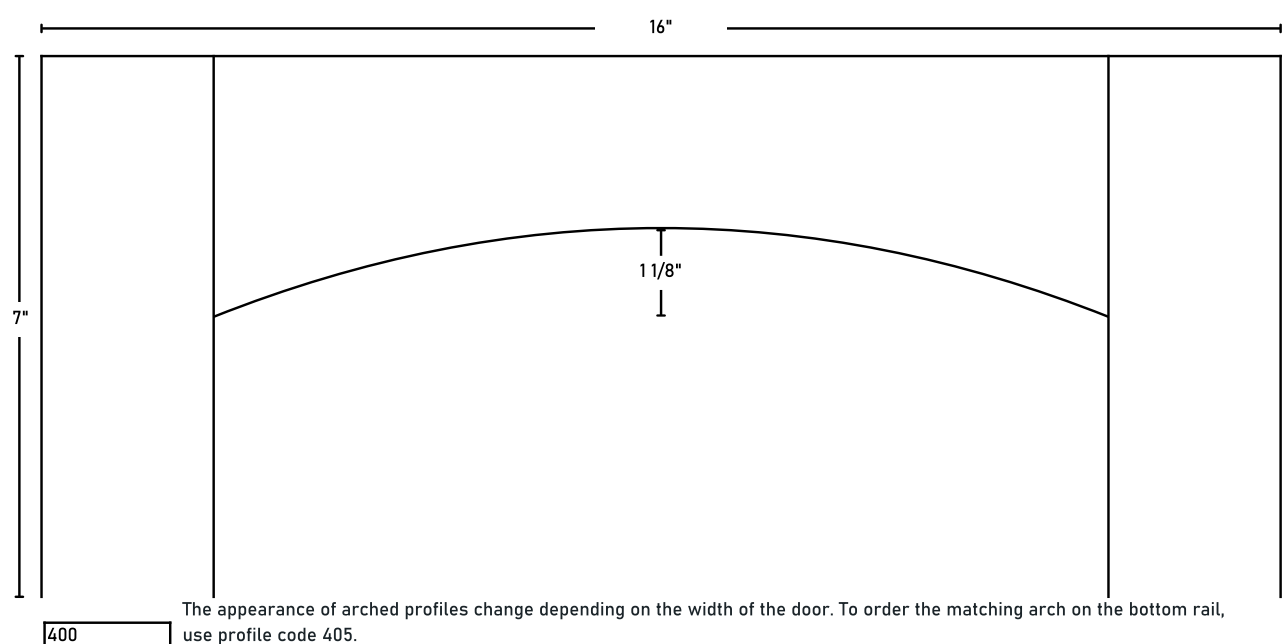

The appearance of arched profiles change depending on the width of the door. To order the matching arch on the bottom rail, use profile code 205.

Arch Profiles

Arch Profile: 300

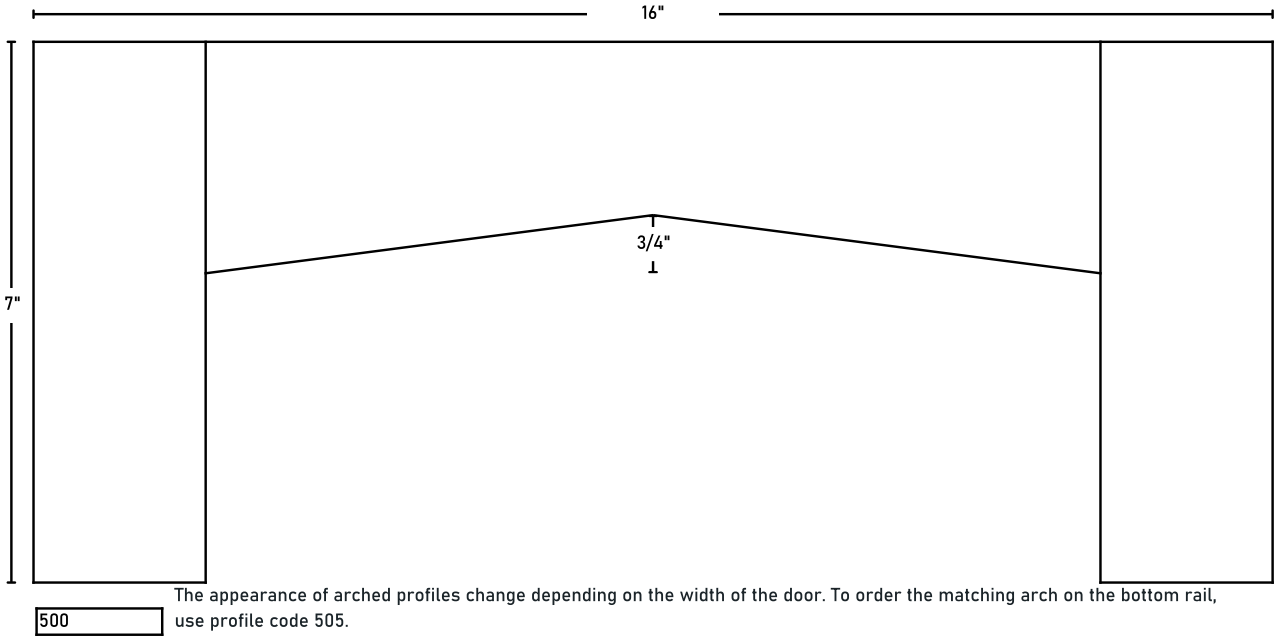

Arch Profile: 400

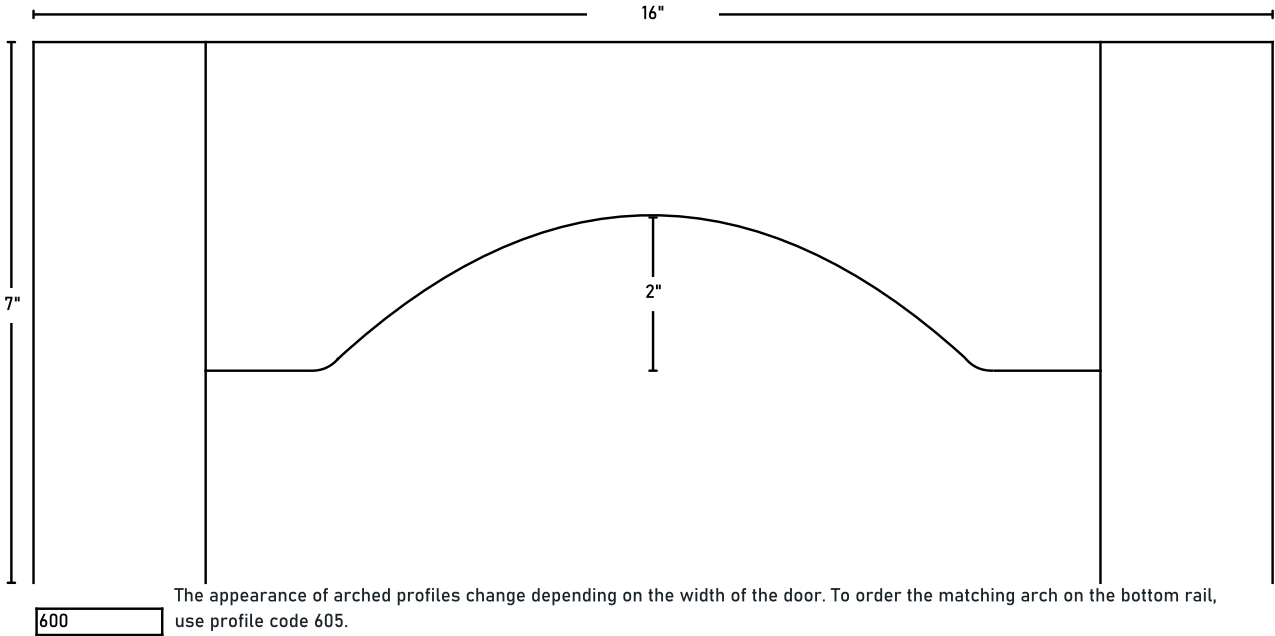

Arch Profiles

Arch Profile: 500

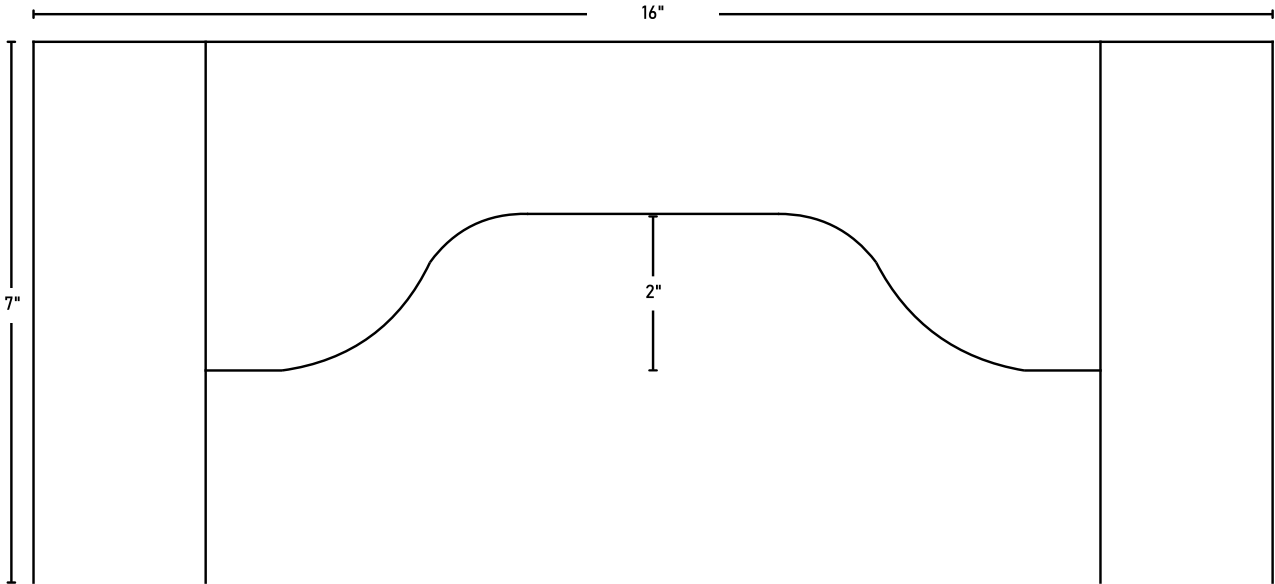

Arch Profile: 600

Arch Profiles

Arch Profile: 700

700

The appearance of arched profiles change depending on the width of the door. To order the matching arch on the bottom rail, use profile code 705.

Start Working With Cutting Edge in Three Steps

Request Your Contractor Account

Visit <https://cuttingedgeinc.ca/request-your-contractor-account/> and fill out the form. Our team will contact you by phone within one business day to finalize your account and get you signed in.

Place Your First Order
