

Slim Shaker Profiles 2026

Introduction To Slim Shaker Profiles

Slim Shaker Profile Sheets

This page introduces our most popular slim shaker applied moulding profiles, while the following pages show the cross-section details for each moulding. Together, they help you compare profiles and select the applied moulding that best suits your project.

Understanding The Drawings

The drawings show our most popular applied moulding profiles. They illustrate the shape and finished dimensions of each profile, not the overall length of the moulding.

Custom Moulding Widths

You can customize the width of the applied mouldings, excluding the Radius profiles. When manual adjustments are required, a \$195 set-up fee may apply.

Centre Panel Construction

Applied moulding slim shaker doors include a veneer centre panel that sits flush with the back of the applied moulding.

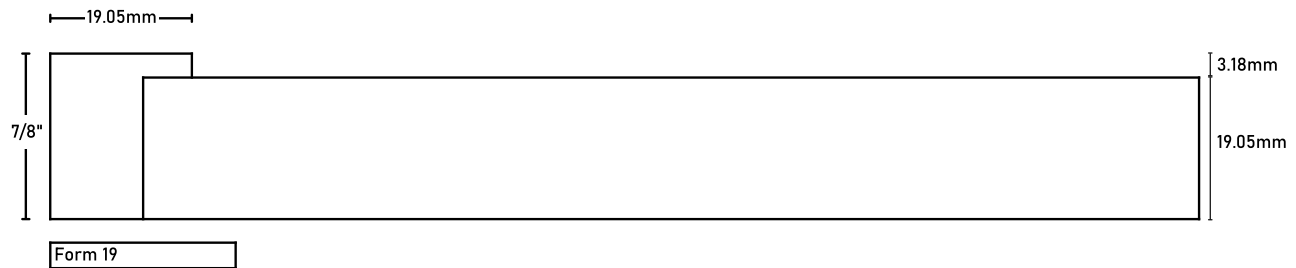

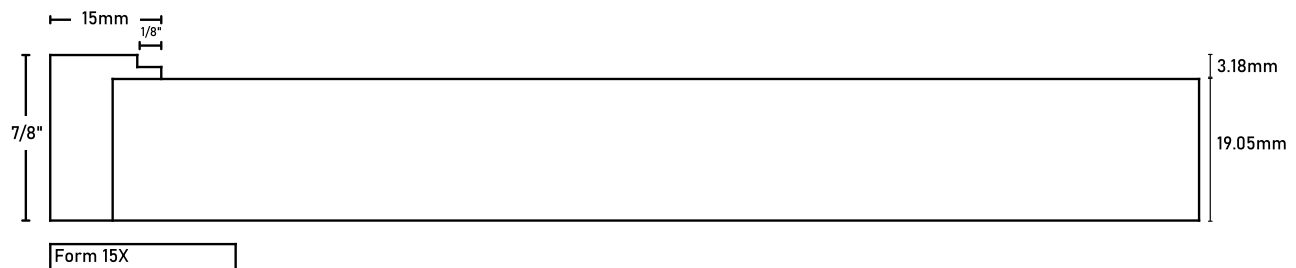

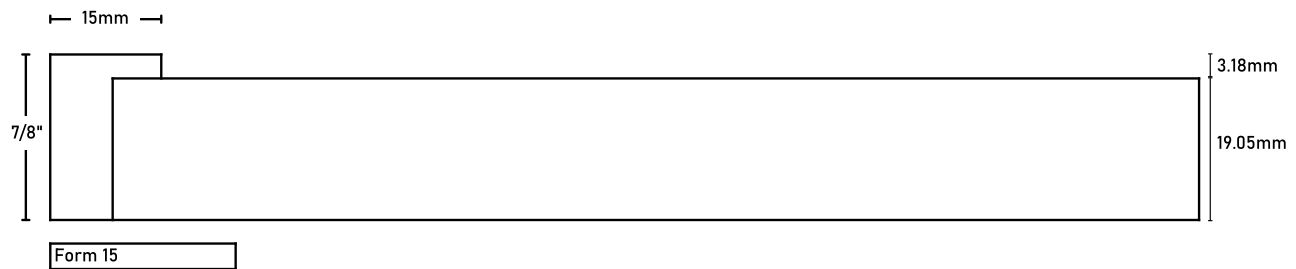

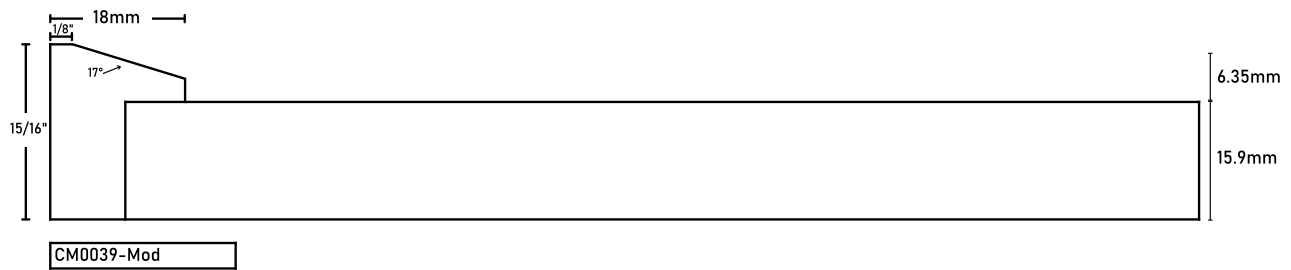

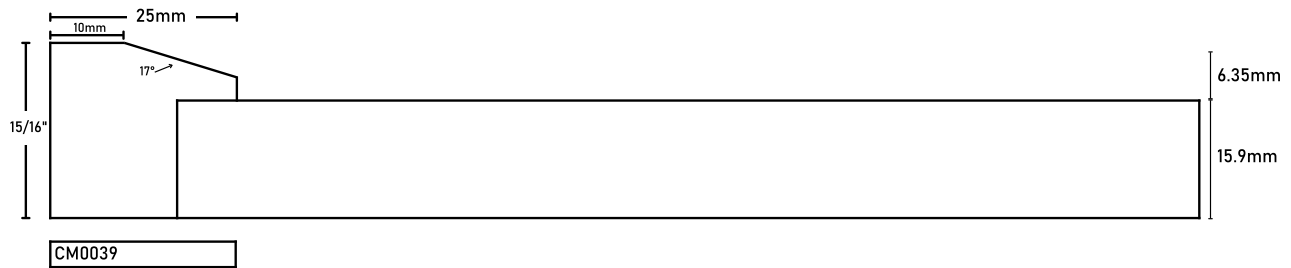

5/8" Veneer Availability

Profiles CM0039 and CM0039-Mod require 5/8" veneer. This material has limited availability and may need to be specially ordered. When special-order material is required, you cannot cancel the order once you have provided a signed confirmation.

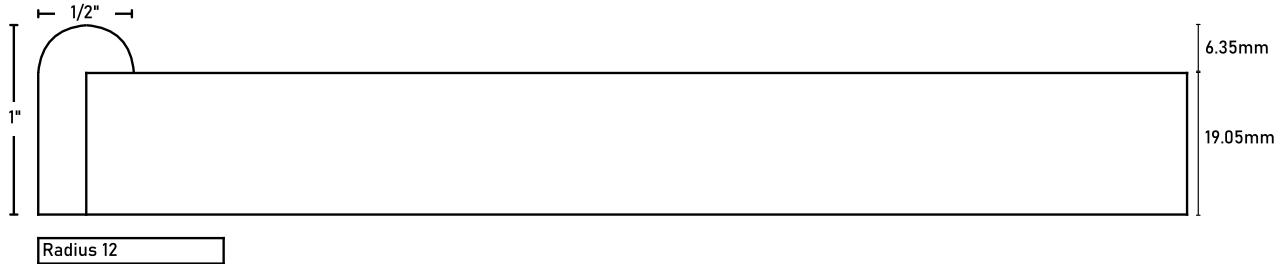

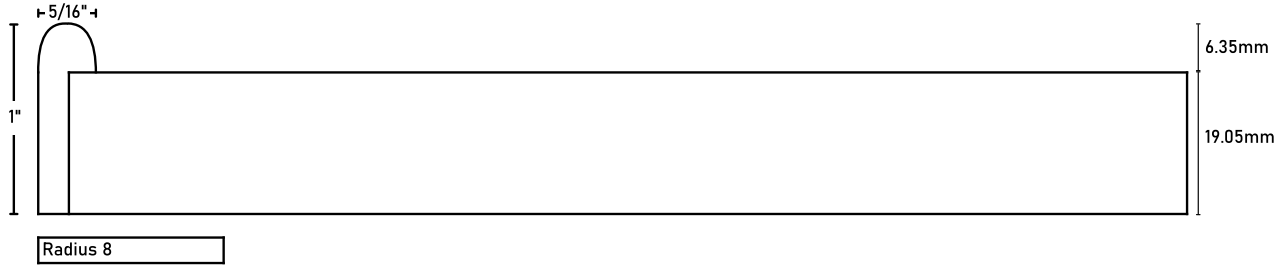

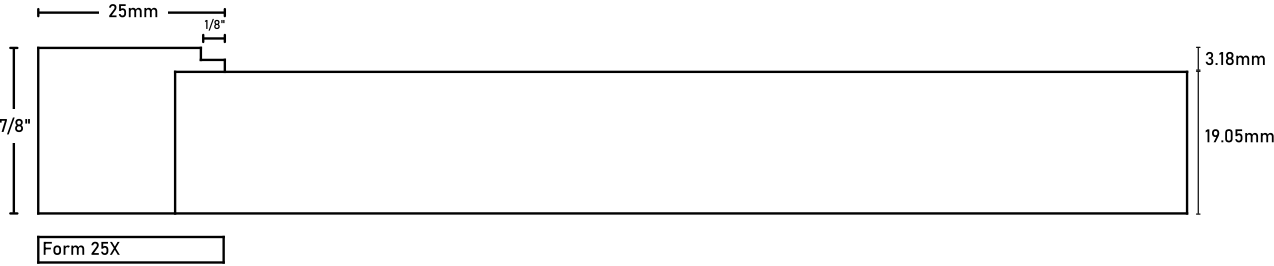

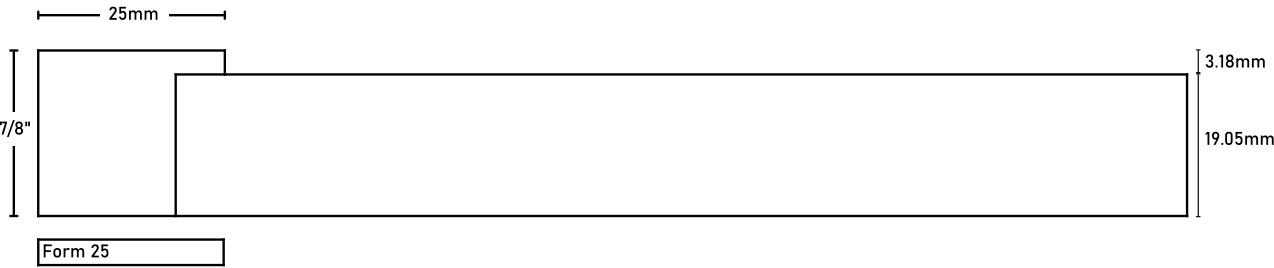

Slight Profile Variations

Finished profile dimensions may vary slightly from the measurements shown. Applied mouldings are machined and hand-sanded, and tooling can vary slightly over time. These minor variations are normal and will not affect the overall appearance or performance of the door.
